**Brief Description of Arguments to be Presented:**

The cited references, either alone or in combination, fail to teach or suggest a particular person comparing unit comparing the user's face-picture taken by the image pickup device with a face-picture of a particular person, who is characterized as of a special concern; and an authentication unit, when the degree of similarity is higher than the predetermined value, deciding whether or not the user's face-picture is identical with the face-picture of the user by a method stricter than the method used before, as recited in claim 2. Further, the cited references, either alone or in combination, fail to teach or suggest a particular person comparing unit comparing said user's face-picture taken by said image pickup unit with a stored face-picture of a person of interest, wherein the stored face-picture of the user is different from the stored face-picture of the person of interest, outputting as comparison result a degree of similarity therebetween, and deciding whether said degree of similarity is higher than a predetermined value; and an authentication unit, when said degree of similarity is higher than said predetermined value, determining whether or not said user's face-picture taken by the image pick-up unit is identical with the stored face-picture of the user by a first method, and when said degree of similarity is lower than said predetermined value, determining whether or not said user's face picture taken by the image pick-up unit is identical with the stored face picture of the user by a second method, the first method being different than the second method, as recited in claim 19.
